

# Providing Feedback to Pupils

There are various ways pupils can submit work to teachers which will allow them to provide feedback.

The easiest way to receive feedback is to email work directly to teachers. Documents can be attached or, if work is on paper, a photograph can be taken and emailed. **All pupils have access to a school email account which teachers will reply to.**

Subjects which set work via Google Doc means work can be completed on the document and it saves automatically. Teachers can see work without having to send anything to them and they can provide feedback directly to pupils.

OneNote

Subjects using OneNote allows work to be completed in an electronic book and it will save automatically. Teachers can see work without having to send anything to them and they can provide feedback directly to pupils.

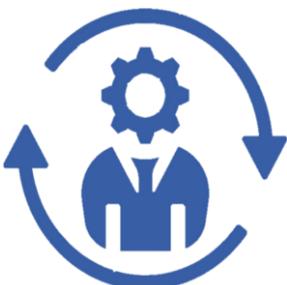

hegartymaths

Hegarty Maths allows pupils to access personalised lessons with video tutorials covering skills in depth, building on prior learning. At the end of each section, pupils receive bespoke assessments. Automatic feedback is given and tracked so pupils can focus on areas of most need. This is monitored by pupils' maths teachers.

MyGCSE Science (Year 9 and 10 only) allows pupils to access personalised lessons with video tutorials covering concepts and building on prior learning. At the end of each section, pupils receive bespoke assessments. Automatic feedback is given and tracked so pupils can focus on areas of most need. This is monitored by pupils' science teachers.

Another way that staff provide feedback to pupils is by adapting the learning being set. When pupils submit work to teachers, should they identify a specific area that requires further reinforcement, they will adapt future learning set.
